

North City Roofing — From First Click to Signed Job

Oct 8, 2026

An AI-powered lead engine and an installable operations app took a Bay Area roofing company from scattered tools and missed leads to one connected pipeline: 17 live automations, 100+ custom fields, and 43,000 duplicate contacts eliminated.

Project at a glance

Item	Details
Client	North City Roofing, residential roofing in Santa Clara County, CA (northcityroofing.com)
Role	Automation architecture, product design, full-stack development
Stack	GoHighLevel, Zapier, JobNimbus, React, TypeScript, Vite, Tailwind CSS, Supabase, Recharts
Scope	Lead capture, AI voice follow-up, 17 CRM automations, 100+ custom fields, JobNimbus integration, installable team dashboard
Live app	dashboard.northcityroofing.com (private, client login)

The problem

North City Roofing was losing leads before anyone ever reached a roof.

- **Website leads waited on a callback.** Someone still had to follow up, find a time, and book the estimate by hand.
- **Yelp leads stayed trapped in Yelp's inbox.** Many arrived after hours, often without a phone number. If no one replied fast, the homeowner hired the next roofer.
- **Every qualified lead was retyped into JobNimbus**, where sales runs its jobs. Slow, and easy to get wrong.

- **Five disconnected tools:** a CRM, paper inspection forms, a separate calendar, an assignments spreadsheet, and a folder of PDFs no one could find.
- **Paper inspections.** Inspectors filled out forms on rooftops; the office retyped them later. No one knew which jobs were worth pursuing until weeks later.
- **43,000 duplicate contacts** from repeated CRM syncs made the contact list unusable.

Layer 1: the lead engine

Every lead, from the website or Yelp, is captured, answered, and routed within seconds by 17 live GoHighLevel workflows and 100+ custom fields.

Booking-first estimate form. A 4-step form (Service, Property, Address, Contact) covers eight services: roofing, repairs, gutters, cleaning, skylights, inspection, roof coating, and rejuvenation. A one-tap toggle flags financing interest. On submit, a booking calendar opens right away, so the homeowner leaves with an appointment instead of a "we'll call you."

Yelp straight into the CRM. A Zapier integration creates or updates every new Yelp lead as a GoHighLevel contact, with the Yelp Lead ID, the requested service, and the homeowner's full project answers. A bot engages each lead immediately, even after hours.

Workflow group	Workflows	What they do
Website (6)	Form Intake, AI Intake, AI Urgent Repairs, Calendar Form Webhook, Website Lead → Assign Bot, Appointment Booked	Create the contact and opportunity, assign a team member, tag by source, property type, and service, fast-track emergency repairs and financing requests, alert the team by SMS and email, and confirm with the homeowner. An AI voice agent calls urgent-repair leads to complete intake.

Workflow group	Workflows	What they do
Yelp (7)	Yelp Lead → Assign Bot, Detect Abandoned Yelp Leads, Abandoned Workflow, Bot – No Booking, Booking Confirmed, Qualified – Send to JobNimbus, Won Workflow	Engage every Yelp lead instantly, recover leads that go quiet or don't book, confirm bookings, and follow up on won jobs.
Dashboard sync (4)	Contact to Dashboard, Call Completed → Dashboard, Visit Inspection Completed, Assessment Form Webhook	Keep GoHighLevel and the team dashboard in sync: contacts, calls, inspections, and assessments.

Deep dive: the JobNimbus handoff

Qualified leads reach the sales team's job system with zero retyping and zero duplicates.

1. **Trigger:** a contact is tagged qualified, or its pipeline stage changes.
2. **Duplicate guard:** if the contact already carries the `sent_to_jobnimbus` tag, the flow stops.
3. **Format:** custom code builds the payload.
4. **Route by source:** a branch checks the Yelp Lead ID, so Yelp and website leads each arrive with the right data.
5. **Send:** the contact is tagged as sent, a webhook creates the lead in JobNimbus, and the team gets an SMS alert.

Layer 2: the operations app

A role-based web app that installs to the home screen on iOS and Android like a native app, with its own branded icon.

Owner command center

- **Team Performance:** live KPI cards (today, this week, this month) and an Analytics Overview of contacts, assignments, and completed inspections over 7, 30, or 90 days. A server-side Postgres function keeps it fast across 31,000+ contacts.
- **Top Performers:** a ranking of team members by assigned and completed inspections.

- **Leads pipeline:** every assessed contact marked Qualified or Not Qualified, with a full assessment drawer and CSV export. Status changes sync back to the CRM.
- **Daily operations:** Priorities, Contacts with tap-to-call, Team, two live-synced Calendars, Appointments, Admin Booking, Sales Form, Announcements, and Files & Completions.

Member app, built for the roof

- **Assignments** move through Start → Continue → Completed.
- **A 6-step assessment wizard** covers project details, roofing material, wood damage, vents and flashings, materials and access, and a final review. Large tap targets, auto-save, and a sticky action bar make it usable on a phone in the sun.
- **Instant qualification:** one question at the end, "Is this a qualified lead?", updates the CRM in real time.
- **Branded PDF reports** are generated automatically, viewable in the app, and saved to the contact.

Technical highlights

- **CRM sync that scales.** Upserts run in 500-row batches on a unique contact ID, with deduplication before every write and a guard against overlapping runs. This eliminated 43,000 duplicates for good.
- **Server-side analytics.** Chart counts run in Postgres, so the dashboard stays instant at any contact volume.
- **100+ custom fields** mapped across GoHighLevel, the dashboard, and JobNimbus.
- **One webhook, one payload.** Each assessment sends the full scope, the PDF link, the qualification answer, and the inspector's identity in a single request.
- **Real-time by default.** Supabase realtime keeps every view current without a refresh.
- **Safe handoffs.** Tag guards make sure no lead is ever sent to JobNimbus twice.

Results

- **No more lost leads.** Website and Yelp leads land in one CRM with instant replies and booking, day or night.
- **Abandoned leads are recovered automatically** instead of forgotten.
- **One app replaces five tools.**

- **Paper to PDF in minutes.** Inspections are captured on a phone, on the roof, with nothing lost.
- **Instant qualification.** The office sees Qualified or Not Qualified the moment an inspector submits, not weeks later.
- **43,000 duplicates eliminated** and prevented from returning.
- **Zero double entry.** Qualified leads flow into JobNimbus automatically.

What's next

- Offline mode for the inspection wizard, for rooftops with weak signal.
- Personal performance analytics for each inspector.
